Infiltrator[®] Systems, Inc Announces the Formation of Aquaworx[™]
New Division to Offer Septic System Remediation

OLD SAYBROOK, CT (June 6, 2007) – Infiltrator Systems Inc. (Infiltrator), the national leader in onsite wastewater management, announces the launch of Aquaworx, a new division that will offer advanced treatment solutions. The first product being marketing by Aquaworx is the Aquaworx Remediator[™].

This new initiative moves Infiltrator closer to its goal of being the complete onsite systems provider. Additional products will be introduced in the near term to complement Infiltrator's existing product lines.

“Infiltrator has been very fortunate over the years to have forged great relationships with regulators, distributors and installers who have helped us to better understand the needs of the onsite wastewater industry. It is our expectation that this new platform will grow as our customers' businesses grow and shift to more advanced technologies,” says Roy Moore, President of Infiltrator Systems.

The Aquaworx Remediator is a simple, easy to install septic system remediation technology that renovates failing septic systems with minimal landscape disruption. This system is inserted into an existing septic tank of a malfunctioning system and reverses the drainfield clogging process. It is a permanent solution that requires minimal cost to operate and maintain. The Aquaworx Remediator was formerly marketed as the Pirana Aerobic Bacterial Generator by Piranaco.

Judd Efinger, General Manager of Aquaworx states, "The fastest growth segment in the wastewater industry is advanced treatment. The scarcity of easily developed land and the ever-present objective of cleaner water are accelerating this trend. Our goal is to elevate the acceptance of the advanced treatment segment by leveraging our sales and distribution networks with cutting-edge technologies. The Aquaworx team is looking forward to helping drive the movement toward a greener tomorrow."

Since its inception in 1987, Infiltrator has introduced innovative products that meet increasingly stringent environmental and regulatory onsite wastewater treatment requirements. Through its understanding of the marketplace -- and the integration of engineering and manufacturing expertise, science, and technology -- Infiltrator continues its leadership in the onsite wastewater market. The company provides installers, designers and property owners with superior, cost-efficient solutions to their onsite septic needs.

Infiltrator is the original and number-one plastic leachfield chamber in the onsite industry and is approved in all 50 states. In 2006, nearly one in three leachfield systems installed in North America was an Infiltrator Chamber System.
